

Chin-Yi ACF-180 Automatic Encapsulation Machine

Chin-Yi's new ACF-180 automatic encapsulation machine has been test run for about one year by SUSS Technology in production operation of herbal products. It was concluded to be reliable once put in use. The design of the machine uses gears and cams, instead of chains, resulting in greater durability. The machine is compact in size, so it requires less space to operate than most other similar machines.

SUSS test ran the machine at 50 rpm to produce about 400,000 capsules daily for one herbal product and about 300,000 capsules daily for another sticker product. Both products used size #0 Veggie Capsules. They had been run as routine production for at least 3 months each. The machine can be run at faster rpms if the formulations are easier to flow and fill. Best of all, the machine is listed at \$169,000.00 FOB US continental locations.

The price includes one trip, two working days for machine set up, test run and training, and two years major components warranty.

A regular maintenance contract can be set up on an annual basis.
